About Me

Software Engineering undergraduate with experience in full-stack development, API integration, and database management. Skilled in building responsive and scalable applications using modern technologies. Strong analytical thinking, teamwork, and a passion for continuous learning and innovation.

Skills

- Programming Languages: Java, JavaScript, PHP, TypeScript.
- Web & Mobile Development: React, Next.js, HTML, CSS, React Native, Android Development.
- Backend & APIs: RESTful APIs, WebSockets, Firebase.
- Databases & ORMs: MySQL, MongoDB, Hibernate, Firestore.
- Cloud & Technologies: Firebase, Cloud-based Applications, Machine Learning (ML).
- Tools: Git, Figma, Android Studio, Expo, Arduino.
- Security & Concepts: Ethical Hacking, Basic Cybersecurity Practices.
- **Soft Skills:** Problem-solving, Teamwork, Communication, Time Management, Leadership.

Languages

- Sinhala: Native
- English: Intermediate

Education

Bachelor of Software Engineering (Expected Dec 2026), Birmingham City University

Undergraduate 2025 - 2026

- Exploring advanced topics such as Android app development, cybersecurity, cyber law, and cloud computing.
- Gaining hands-on experience with secure software development practices, version control, and modern frameworks..
- Working on real-world projects, research-based coursework, and team collaborations to enhance problem-solving and analytical skills.

Higher National Diploma In Software Engineering Java Institute for Advanced Technology

Completed 2022 - 2024

- Built a strong object-oriented programming (OOP) foundation with Java, JavaScript, PHP, and other technologies.
- Gained expertise in software project management, quality assurance (QA), and system analysis.
- Developed hands-on experience in full-stack development, API integration, and database management.
- Worked on team-based projects, applying agile methodologies and best software development practices.

Experience

Full-Stack Developer & UI/UX Designer

"Developing scalable web solutions while contributing to UI/UX design and Agile workflows."

CeylonSoft Innovation December-2025-Present

- Worked on full-stack development, building front-end and back-end components, UI/UX design, and integrating RESTful APIs.
- Developed backend systems using Laravel, applying MVC architecture and authentication features.
- Managed databases such as MySQL and MongoDB using ORM tools like Hibernate and Eloquent.
- Collaborated in Agile teams, contributing to software design, development, and timely project delivery.

Projects

Travel Ra Taxi & Tours - Full-Stack Web Application (Laravel)

A responsive web application built using Laravel (PHP Framework) and Blade templating, featuring a modern landing page, seamless trip planning and booking flow, SEO-optimized structure, smooth navigation, and an integrated inquiry/contact system.

Alazea - Full-stack Java E-commerce web application

A full-stack Java web application built using Java (Servlet & JSP), Hibernate ORM, and MySQL, featuring user registration with email verification, advanced product search and filtering, shopping cart and secure checkout, and an admin dashboard for product and order management, designed to support a seamless online plant-selling and garden service platform.

Bloom - E-commerce Fashion Store

A modern e-commerce platform built using PHP, MySQL, and Bootstrap, featuring user authentication, advanced product search and filtering, shopping cart and Wishlist, Stripe payment integration, order management, and a real-time messaging system between users and admin.

BakeSoft - Bakery POS System

BakeSoft is a desktop-based Bakery Management & POS System developed as a collaborative academic project. It automates bakery operations including staff management, customer CRM with loyalty points, inventory and stock control, production tracking, sales processing, attendance, transport logistics, and advanced reporting. The system enables efficient management of daily operations and provides actionable insights for business decisions.

ChatApp - React Native Chat Application

A cross-platform real-time chat application built using React Native, Java (Servlets) with Hibernate, WebSocket, and MySQL, featuring instant messaging, secure authentication, private chats, user status tracking, and multimedia support including images, videos, emojis, and voice notes.

Travel Ra – Taxi & Tour M-Commerce Application (Ongoing)

Travel Ra is a full-stack taxi and tour system consisting of a Java-based Android application for tour discovery and real-time taxi booking with fare calculation, a React/TypeScript admin dashboard for managing fleet, bookings, and users, and a Firebase-powered cloud backend that provides real-time database synchronization, secure authentication, and cloud storage.

Additional projects are available on my website.
